Namma Space: Additional Links and Prototypes

Team ID: TM-12354C3F6F2 · **Institute:** Vellore Institute of Technology · Round 1, Techfest 2026-27, IIT Bombay
Members: Nilesh Kumar Srivastava, Ojas Ashish Kulkarni, Ujesha Sivaramakrishnan, Ashwin Dandotiya
Every link for our submission is collected here. All links are public and need no login or install.

> **Live web viewer (free roam): https://namma-space-pearl.vercel.app**
> It opens on our classroom, reconstructed from one phone video. Close the welcome card, click **Enter walkthrough**, then walk with `W` `A` `S` `D` and look with the mouse. A desktop or laptop browser with WebGL2 is needed.

1. Live viewer

What	Link
Classroom, our phone capture (default scene)	Open the classroom
Workshop room, our 70-photo capture (sparse model)	Open the workshop room
Apartment, external benchmark dataset (Meta Eyeful Tower, MIT licence)	Open the apartment
Mirror of the same site (GitHub Pages)	GitHub Pages mirror

2. Controls

Action	Keys and mouse
Start walking	Click **Enter walkthrough**
Look around	Move the mouse
Walk	`W` `A` `S` `D` or arrow keys; walls and desks block movement
Full screen	`F` or the full-screen button
Release the mouse	`Esc`
Return to the start point	The reset button next to **Enter walkthrough**
Find a place, plot a route	`Ctrl`+`K` or `⌘`+`K`, or the search box below the view
Switch scene	The **Scene** menu above the view

3. Demo video

What	Link
Round 1 demo video (3 to 5 min)	**[DEMO_VIDEO_DRIVE_URL]**

4. Source code, setup and sample data

What	Link
Repository (default branch)	NAMMA-SPACE on GitHub
Setup: reconstruct a space and run the app	README, "Reconstruct a space"
Step-by-step Windows guide with troubleshooting	docs/HANDOFF_UJESHA.md

Capture SOP	docs/SOP.md
Sample data: 36 s classroom clip, with run instructions	tests/sample_data/
Reconstruction pipeline (Python)	pipeline/
Web app on the live site (React + PlayCanvas)	apps/studio/
Classroom scene bundle (manifest, splat, walkable grid, quality report)	apps/studio/public/scenes/classroom/
Tested features and known limitations	docs/STATUS.md

5. External dataset

What	Link
Eyeful Tower, Meta Platforms (MIT licence): source of the apartment benchmark scene	facebookresearch/EyefulTower

6. Prototypes for later rounds

The live web app already includes these, all reachable from its top bar:

Prototype	Where
Place search and shortest-path routing over the walkable grid (Round 2)	Spatial Viewer tab, search box below the view
Capture Studio: organise photos per room and export a validated capture bundle	Capture Studio
Live Scan: phone pairing for on-site capture (Round 3; needs the local development server)	Live Scan tab, labelled "dev only"
